

# To our customers who use Evaporative Air Cooler, RKF Series

## Cooling Element (50812-201007)

Symptom: Smelling and/or poor wind  
Causes: It may smell if the element is dirty or gets moldy. Due to the dirty element, vaporization amount is decreased and cooling efficiency will decline.

## Air filter(50816-201018)

Symptom: Poor wind, low cooling efficiency, and/or fan trouble  
Causes: If air filter is choked with dirt, cooling efficiency will decline. It may cause trouble in fan motor because of overload as well.
